

An Analysis of Star Formation in M31 Using Resolved Stars and Ultraviolet Flux

Jake Simones

2014 10 28

Outline

I. Introduction

- One thing
- Another thing

II. UV-bright regions in M31

- Some other thing
- One thing more

III. Synthetic flux maps of M31

- An additional item
- The second item

IV. Summary and future work

I. Introduction

What can we learn about a stellar population looking only at its light?

I. Introduction

What can we learn about a **stellar population** looking only at its **light**?

I. Introduction

What can we learn about a **stellar population** looking only at its **light**?

Stellar population

A collection of associated stars
(clusters, galaxies, etc.).

I. Introduction

What can we learn about a **stellar population** looking only at its **light**?

Stellar population

A collection of associated stars
(clusters, galaxies, etc.).

Light (integrated flux)

Total light from a stellar population
measured in a specific wavelength range
(optical, UV, etc.).
